

# Certified ULTEM 9085 Resin

ULTEM™ 9085 resin is a flame-retardant high-performance thermoplastic for digital manufacturing and rapid prototyping. It is ideal for the transportation industry due to its high strength-to-weight ratio and its FST (flame, smoke and toxicity) rating. This unique material's certifications make it an excellent choice for the commercial transportation industry – specifically aerospace, marine and ground vehicles. Combined with a Fortus® 3D Printer, ULTEM 9085 resin allows design and manufacturing engineers to produce fully functional parts that are ideal for advanced functional prototypes or end use without the cost or lead time of traditional tooling. Stratasys Certified ULTEM 9085 resin meets the extensive, more stringent test criteria and retains material traceability required by the aerospace industries and regulatory agencies.

- A Certificate of Analysis for both raw material and filament are supplied, documenting test results and identification to match filament manufacturing lot number to raw material batch number. This allows traceability from printed part back to raw material.
- A Certificate of Conformance confirms that the material is manufactured in compliance to approved Stratasys and Industry specifications.

Data contained in this data sheet only applies to certified ULTEM 9085 resin printed on an AICS Fortus 900mc or Fortus Pro 900 system using a T16A tip. Certified ULTEM 9085 resin is supported by an extensive set of multi batch (3), multi-location (5), and multi-machine (2) mechanical and physical property databases. Data is available from Stratasys upon request.

The performance characteristics of these materials may vary according to application, operating conditions, or end use. Each user is responsible for determining that the Stratasys material is safe, lawful, and technically suitable for the intended application, as well as for identifying the proper disposal (or recycling) method consistent with applicable environmental laws and regulations. Stratasys makes no warranties of any kind, express or implied, including, but not limited to, the warranties of merchantability, fitness for a particular use, or warranty against patent infringement.

The information presented in this document are typical values intended for reference and comparison purposes only. They should not be used for design specifications or quality control purposes. End-use material performance can be impacted (+/-) by, but not limited to, part design, end-use conditions, test conditions, color, etc. Actual values will vary with build conditions. Test specimens were built on the AICS Fortus 900mc @ 0.010" (0.254 mm) slice using NCAMP specification configured parameter. Product specifications are subject to change without notice.

<sup>1</sup>All Electrical Property values were generated from the average of test plaques built with default part density (solid). Test plaques were 4.0 x 4.0 x 0.1 inches (102 x 102 x 2.5 mm) and were built both in the flat and vertical orientation. The range of values is mostly the result of the difference in properties of test plaques built in the flat vs. vertical orientation.
